

HUMAN HAIR CARE INSTRUCTIONS

COMB OUT TANGLES

Before washing your wig, always use a wide tooth comb to get rid of tangles. Start combing from the ends of the hair and slowly work your way to the top. This will help to avoid breakage from tugging on the hair.

WIG BLOCKING

Using ball-head pins and your care mannequin, secure your wig with pins at the temples and both sides of the nape. Ensure that the wig is flush to the mannequin so that it is properly blocked from water pressure.

WETTING AND SHAMPOOING

First, completely wet your hair so that there are no dry parts. Once this is wet, work shampoo into the hair by **stroking it down from the top to the tips**. Never use circular motions! Your hands should always follow the natural direction of the hair when you wash your wig.

RINSE, CONDITION, RINSE

Do not apply conditioner to the roots! Rinse shampoo completely from the hair. Work a generous amount of conditioner into the hair starting at the ends and working your way up. Stroke your hands gently through the hair to distribute the conditioner. rinse well.

TOWEL DRY & AIR DRY

once hair is free of product, use a towel to pat and gently squeeze out the excess water. Do not rub. Then follow the three steps guided below and air dry your wig overnight.

1. Lay flat on towel
2. Fold both sides over.
3. Gently twist towel. After you have towel dried the wig, put it back on your mannequin to air dry overnight.

It is preferable to let your wig/topper air dry as heat styling tools are not healthy for human hair pieces.

STYLING WITH HOT TOOLS

Because human hair wigs do not grow as natural as hair does, we do not recommend styling your hair with hot tools daily. Overtime Heat will damage the hair even if used carefully. However, if you choose to style with hot tools here are some guidelines:

1. Use heat protectant spray, but be prepared to wash the hair more often.
2. Blow dry on medium-high (80-100F/27-38C)
3. Flat iron should be set no higher than 350F/177C
4. Curling irons and wands should be set no higher than 300F/149C
5. Make sure you are staying half an inch to one inch away from wig cap.

SUPPLY LIST FOR WASHING YOUR WIG

1. Care Mannequin
2. 4 Pins , to secure piece in place.
3. Towel
4. Alternative Human Hair shampoo, conditioner & styling treatments.
5. Wide tooth comb
